

Professional equipment for modern and sustainable animal farming

Svea Agri

Svea Agri means effective, sustainable and cost-effective solutions for different farm operations. Our products create added value and facilitate daily farm work.

In 1911, the first Svea mill was manufactured for a Swedish farm and since then, we have supplied quality products to the agricultural sector all over the world. We have our own research and development department and work continuously to improve and optimise our products and solutions. The company is competent to manage turnkey projects or the development of customised product solutions.

Svea Agri has a solid tradition in the development, manufacture, design, installation, service and sales of professional equipment for sustainable agriculture.

Our products are also used in industry, such as our different auger conveyors used by the food industry and found in garden and agricultural machinery. Our philosophy is to be more than just a supplier, we want to be a partner to help our customers develop and rationalise operating costs.

Feed processing/preparation

System for processing and preparation of feed at farm level, reducing costs and environmentally damaging transports. Our solutions are designed for professional agriculture.

We sell silos for indoor and outdoor use, feed augers and Big Dutchman feeding systems.

Ventilation systems

Systems for cows, pigs and horse barns, both mechanical fan ventilation and controlled natural (thermal buoyancy effect) ventilation.

Own fans, air intakes, ridge ventilation, wall shutters, ventilation panels and central control systems that provide a good barn environment for you and your animals.

Manure pumps

Tractor-driven and electric pumps. Simple to operate and manoeuvre, high flexibility. Pumps that cut and mix to a homogeneous manure slurry - easy to handle from storage to field.

Direct driven electric pump produces less vibration and has a low noise level, resulting in higher operator comfort. The pump can also be built with ground connection to storage.

Manure scraper systems

Systems developed for manure management in all types of barns, regardless of manure and operation. Our manure scraper systems are resistant and robust, with hydraulic, rope, wire or chain drives.

The systems are simple to operate, reliable, and animal-friendly. Clean barn with smart equipment made in Sweden.

Auger conveyors

Augers for many different purposes. Everything from filling and emptying of silos to feeding in barns. Systems for efficient, safe and careful transport of cereals, feed, pellets and powders.

Customised spirals for both agriculture and industrial applications.

Fixtures and Fittings

Customised fixtures and fittings for pig production. Over a hundred years of experience lie behind the skilful development of this modular system.

An easy-care barn with several unique features for a good animal environment and optimal production.
